

US-89, Kanab to Kanab Creek Project

Project Overview

This project has identified transportation solutions for needed safety and maintenance improvements to US-89 from the 300 North Street intersection in Kanab, Utah (R.P. 65.5) north 3.2 miles to the Kanab Creek Bridge (R.P. 68.7). Along this stretch of US-89 there are deficient horizontal curves (at R.P. 66.5), narrow shoulders, roadside hazards, and pavement cracking. To address these deficiencies, the final project will include roadway reconstruction in specific areas to improve horizontal curvature, pavement resurfacing, and shoulder widening.

This project will make the following roadway improvements to US-89 between the 300 North intersection in Kanab and the Kanab Creek Bridge:

- Widen shoulders to 6-feet
- Rehabilitate the asphalt pavement
- Improve sight distance near the Kanab Creek Pond
- Add a southbound left-turn lane at the 300 North Intersection
- Improve storm drainage by reducing ponding/flooding on and near the roadway

Project Schedule

The environmental documentation and design of this project began in October 2006 and are scheduled to be complete in November 2007. The following timeline outlines when project activities will take place (schedule is subject to change):

| | |
|------------------------------------|---------------|
| Public Open House | May 8, 2007 |
| Environmental Document Complete | July 2007 |
| Design Complete | November 2007 |
| Design Advertised for Construction | November 2007 |
| Construction Set to Begin | Winter 2008 |
